### **DETAILED ACTION**

1. The foreign priority document JP 2004-019346, filed on January 28, 2004 was received and acknowledged. However, in order to benefit of the earlier filing date, a certified English translation is required.
2. Claims 1-3 and 6-7 are pending in the application. Claims 4-5 are canceled.

### ***Claim Objections***

3. Claim 6 is objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend on another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claim 6 has not been further treated on the merits.

### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraph of 35 U.S.C. 102 that forms the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

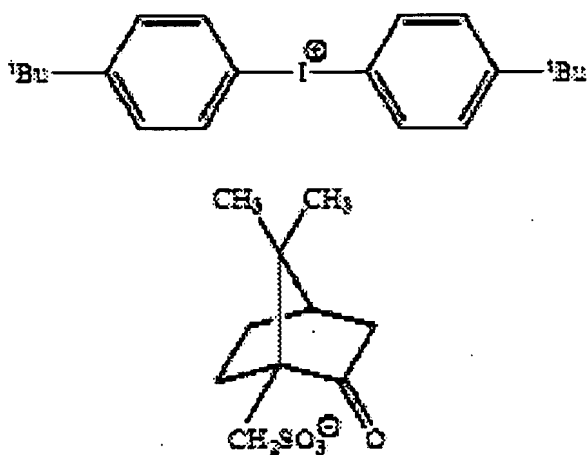

5. Claims 1-3 and 7 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Uenishi et al. (US Patent 6,673,512)

With regard to claims 1-3 and 7, Uenishi et al. disclose a chemical amplification system negative-working resist composition comprising an alkali-soluble resin, a

Art Unit: 1795

compound generating acid by irradiation of an electron beam or X-ray and a crosslinking agent (abstract). The composition also comprises organic basic compounds (column 57, lines 24-27).

The compound generating an acid by irradiation with an electron beam or X-ray can be a iodonium salt represented by the formula (I):

(I) (PAG 3-18 in column 30, lines 35-35).

The anion portion of the compound of formula (I) above is identical to the anion of formula (1) of claim 1 of the instant application.

The anion portion of the compound of formula (I) above comprises a norbornane lactone structure so it meets the limitations of claims 3 and 7.

In the alternative, it would have been obvious for one of ordinary skill in the art to select the compound of formula (I) as compound generating an acid by irradiation for the chemically amplified negative-working resist composition, as being clearly disclosed by Uenishi et al.

***Response to Arguments***

6. Applicant's arguments with respect to claims 1-7 have been considered but are moot in view of the new ground of rejection.

***Conclusion***

7. Applicant's amendment necessitated the new ground of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
